RFIC Tutorial

- **Extend** existing AMS template & tutorial (see *add-rf-macro* branch)
- **Demonstration** with an **RF VCO** macro:
  - Oscillator core & varactor
  - Bias block
  - Buffer output
- **Content:**
  - Layout generation
    - Manual hand drawing in *Klayout*
    - Programmatic using *GDSFactory*
    - AI-driven *KLayout* Python scripts

RFIC Tutorial

- **Content:**
  - DRC, LVS and PEX using *KLayout* and *Magic+Netgen*
  - EM simulation using *AWS Palace* and *gds2palace*
  - Lumped-element netlist generation using *snp2le*
  - Circuit-level simulation using *Xschem* & *VACASK*
  - Focus on **advanced** simulation types:
    - ACSP
    - Transient noise
    - HB, HBAC, HBNOISE
    - PSS, PAC, PNOISE
