This documentation is a Work in Progress.

Important

This repository requires the [IIC-OSIC-TOOLS](#) container with tag 2026.05 or later.

1 Overview

This tutorial walks through the complete open-source AMS chip flow for the **ihp-sg13g2** Open-PDK, from RTL and macro generation through padframe integration, physical implementation, verification, and final views.

The example design combines two digital counter macros, two inverter macros, an SRAM macro, analog and digital pad connectivity, and the top-level chip.
